

# SAVE THE WAVES APP

Empowering surfers and ocean lovers to report and track coastal threats in real-time.

## HOW IT WORKS

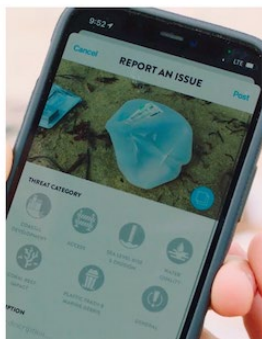

### Take A Photo

Capture what's happening when you see an issue or threat at your local surf spot or beach.

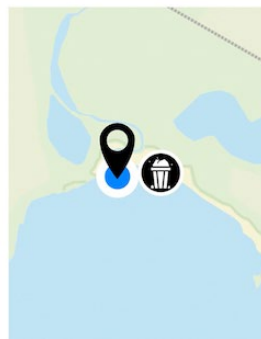

### Select A Threat

Choose an issue from our threat category menu. Write a short description to provide more detail.

### Tag Your Location

Geotag your location and upload it to the app! Your post will alert us and the public to the threat.

## EVERY POST COUNTS

The Save The Waves App crowdsources data from coastal users (like you!) who identify coastal threats like illegal development, plastic pollution and poor water quality.

This data you provide is shared with local partners and coastal agencies in our Coalition to identify and reduce threats in surf ecosystems across the globe.

Available internationally in iOS & Android
